Nuclear arms race

https://www.icanw.org/hiroshima_and_nagasaki_bombings#:~:text=The%20two%20nuclear%20bombs%20dropped,at%20the%20Children's%20Peace%20Memorial

The nuclear bomb was created by Robert J Oppenheimer and was made in Los Alamos, New Mexico and was tested near Alamogordo, New Mexico , in an experiment called the Manhattan project (Boilard, Steve D). This bomb was such a devastating weapon that even the scientist that created it protested in its continued use/testing (Greg, Mitchelle). Although they protested the advancements did not stop, they created more bombs.

The first bombings

ICAN. "Hiroshima and Nagasaki Bombings." ICAN, ICAN, 2018, www.icanw.org/hiroshima_and_nagasaki_bombings.

during WW2 the U.S dropped a nuke code named, little boy, on hiroshima

ICAN. "Hiroshima and Nagasaki Bombings." ICAN, ICAN, 2018, www.icanw.org/hiroshima_and_nagasaki_bombings.

Then a second on Nagasaki, the world finally saw the destructive power that nukes had.

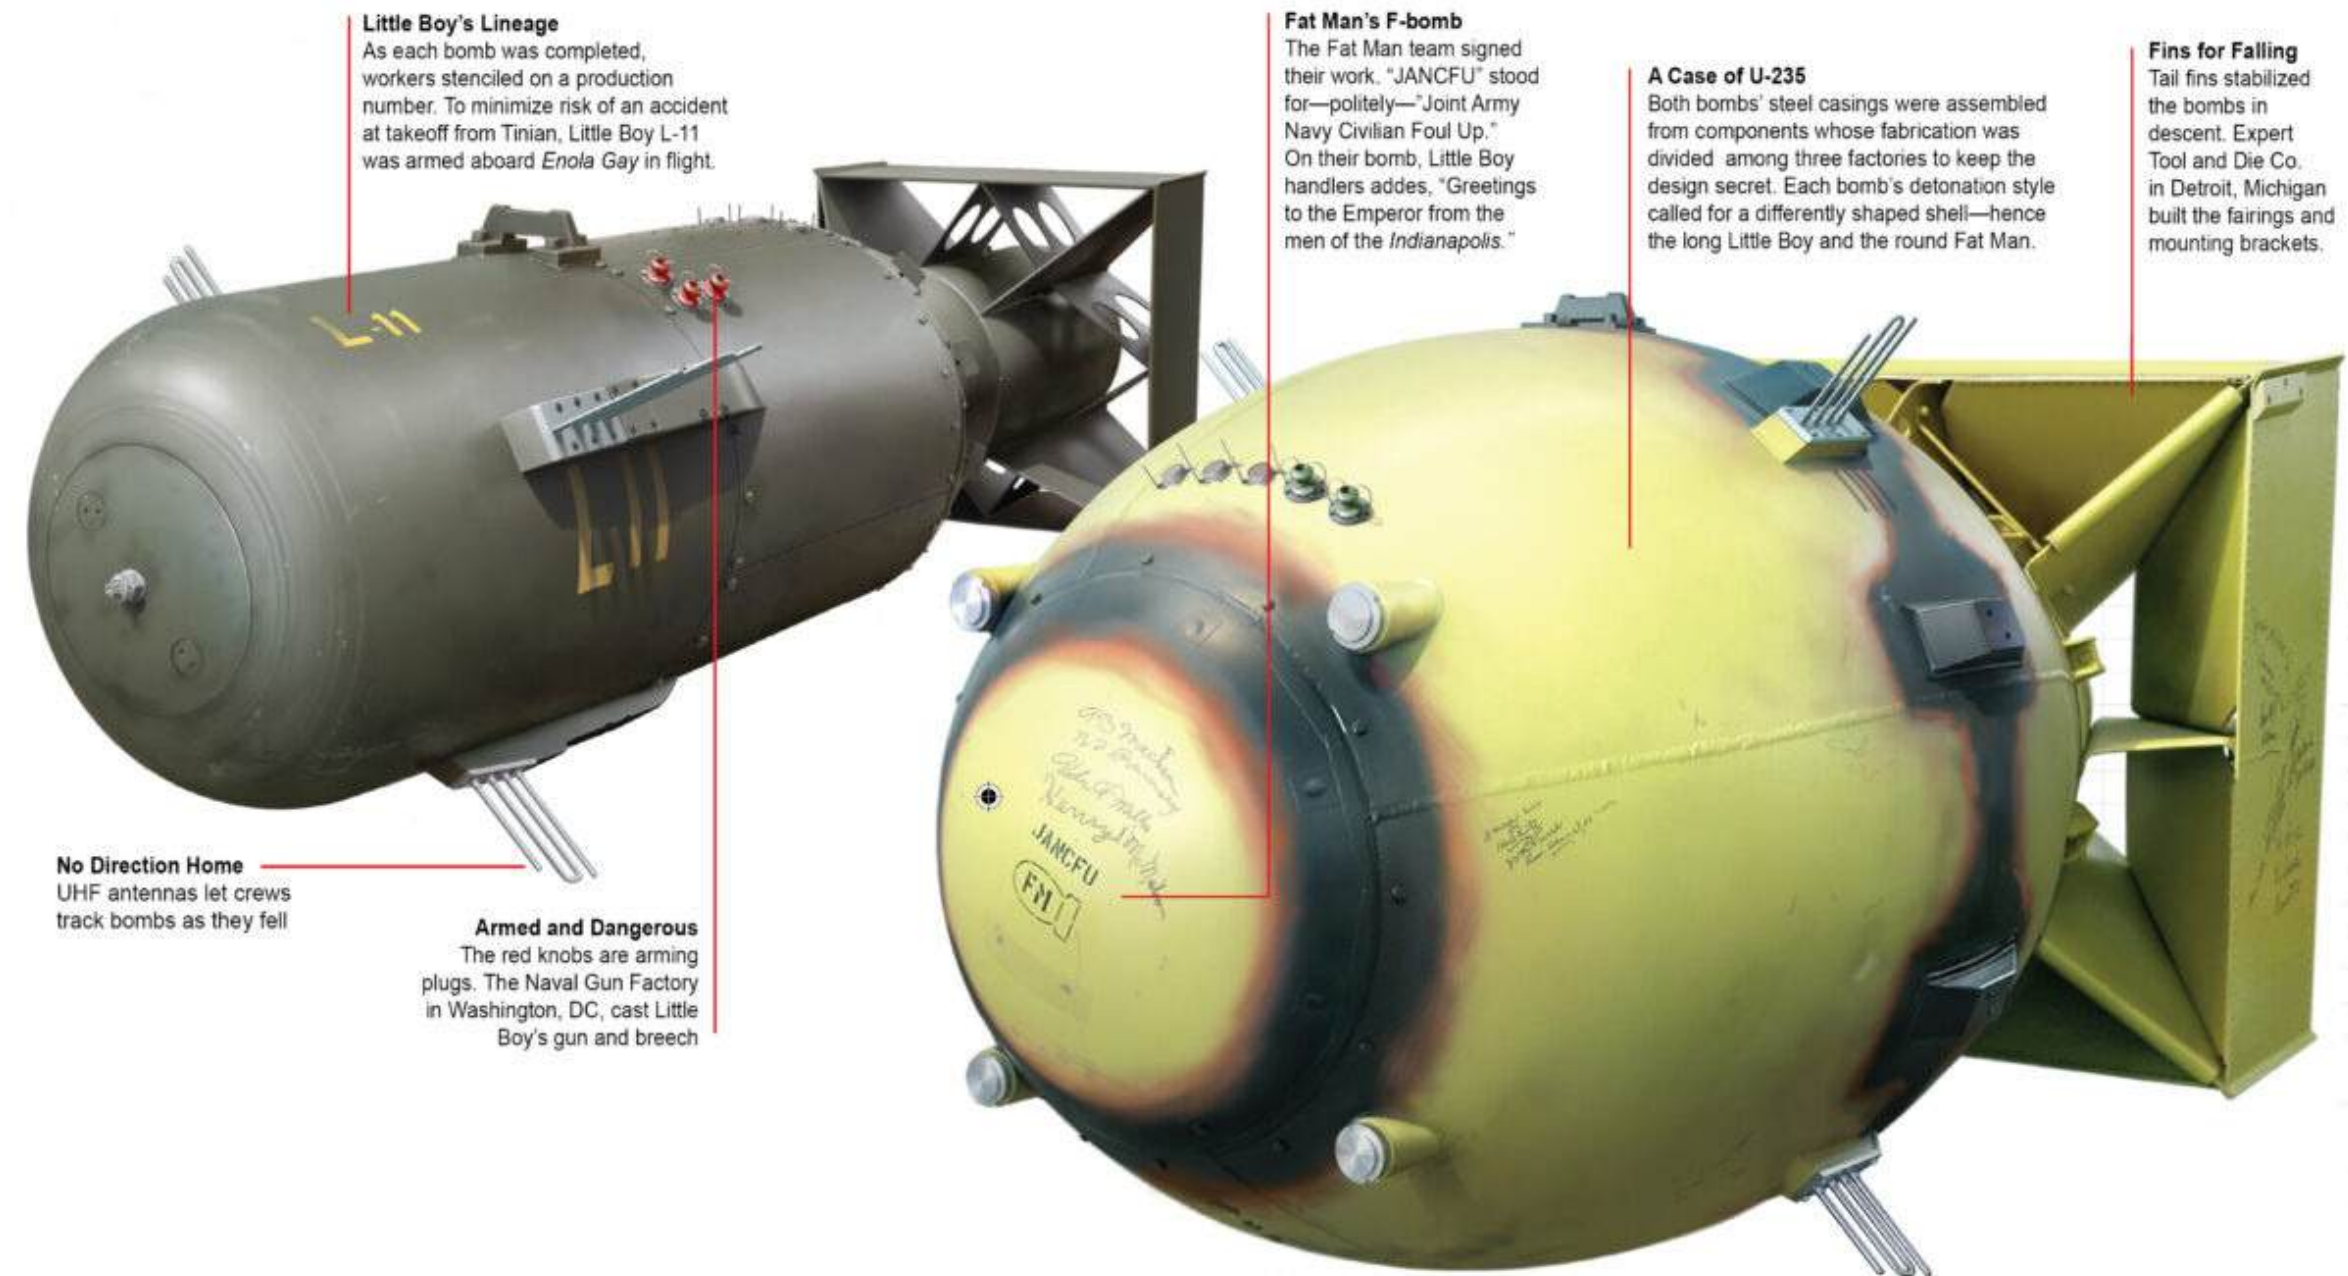

Deaths caused by the bombings

Hiroshima	Nagasaki
140,000	74,000
August 6, 1945.	August 9, 1945

Through 2 bombings Japan lost over 200k people and that number is highly estimated

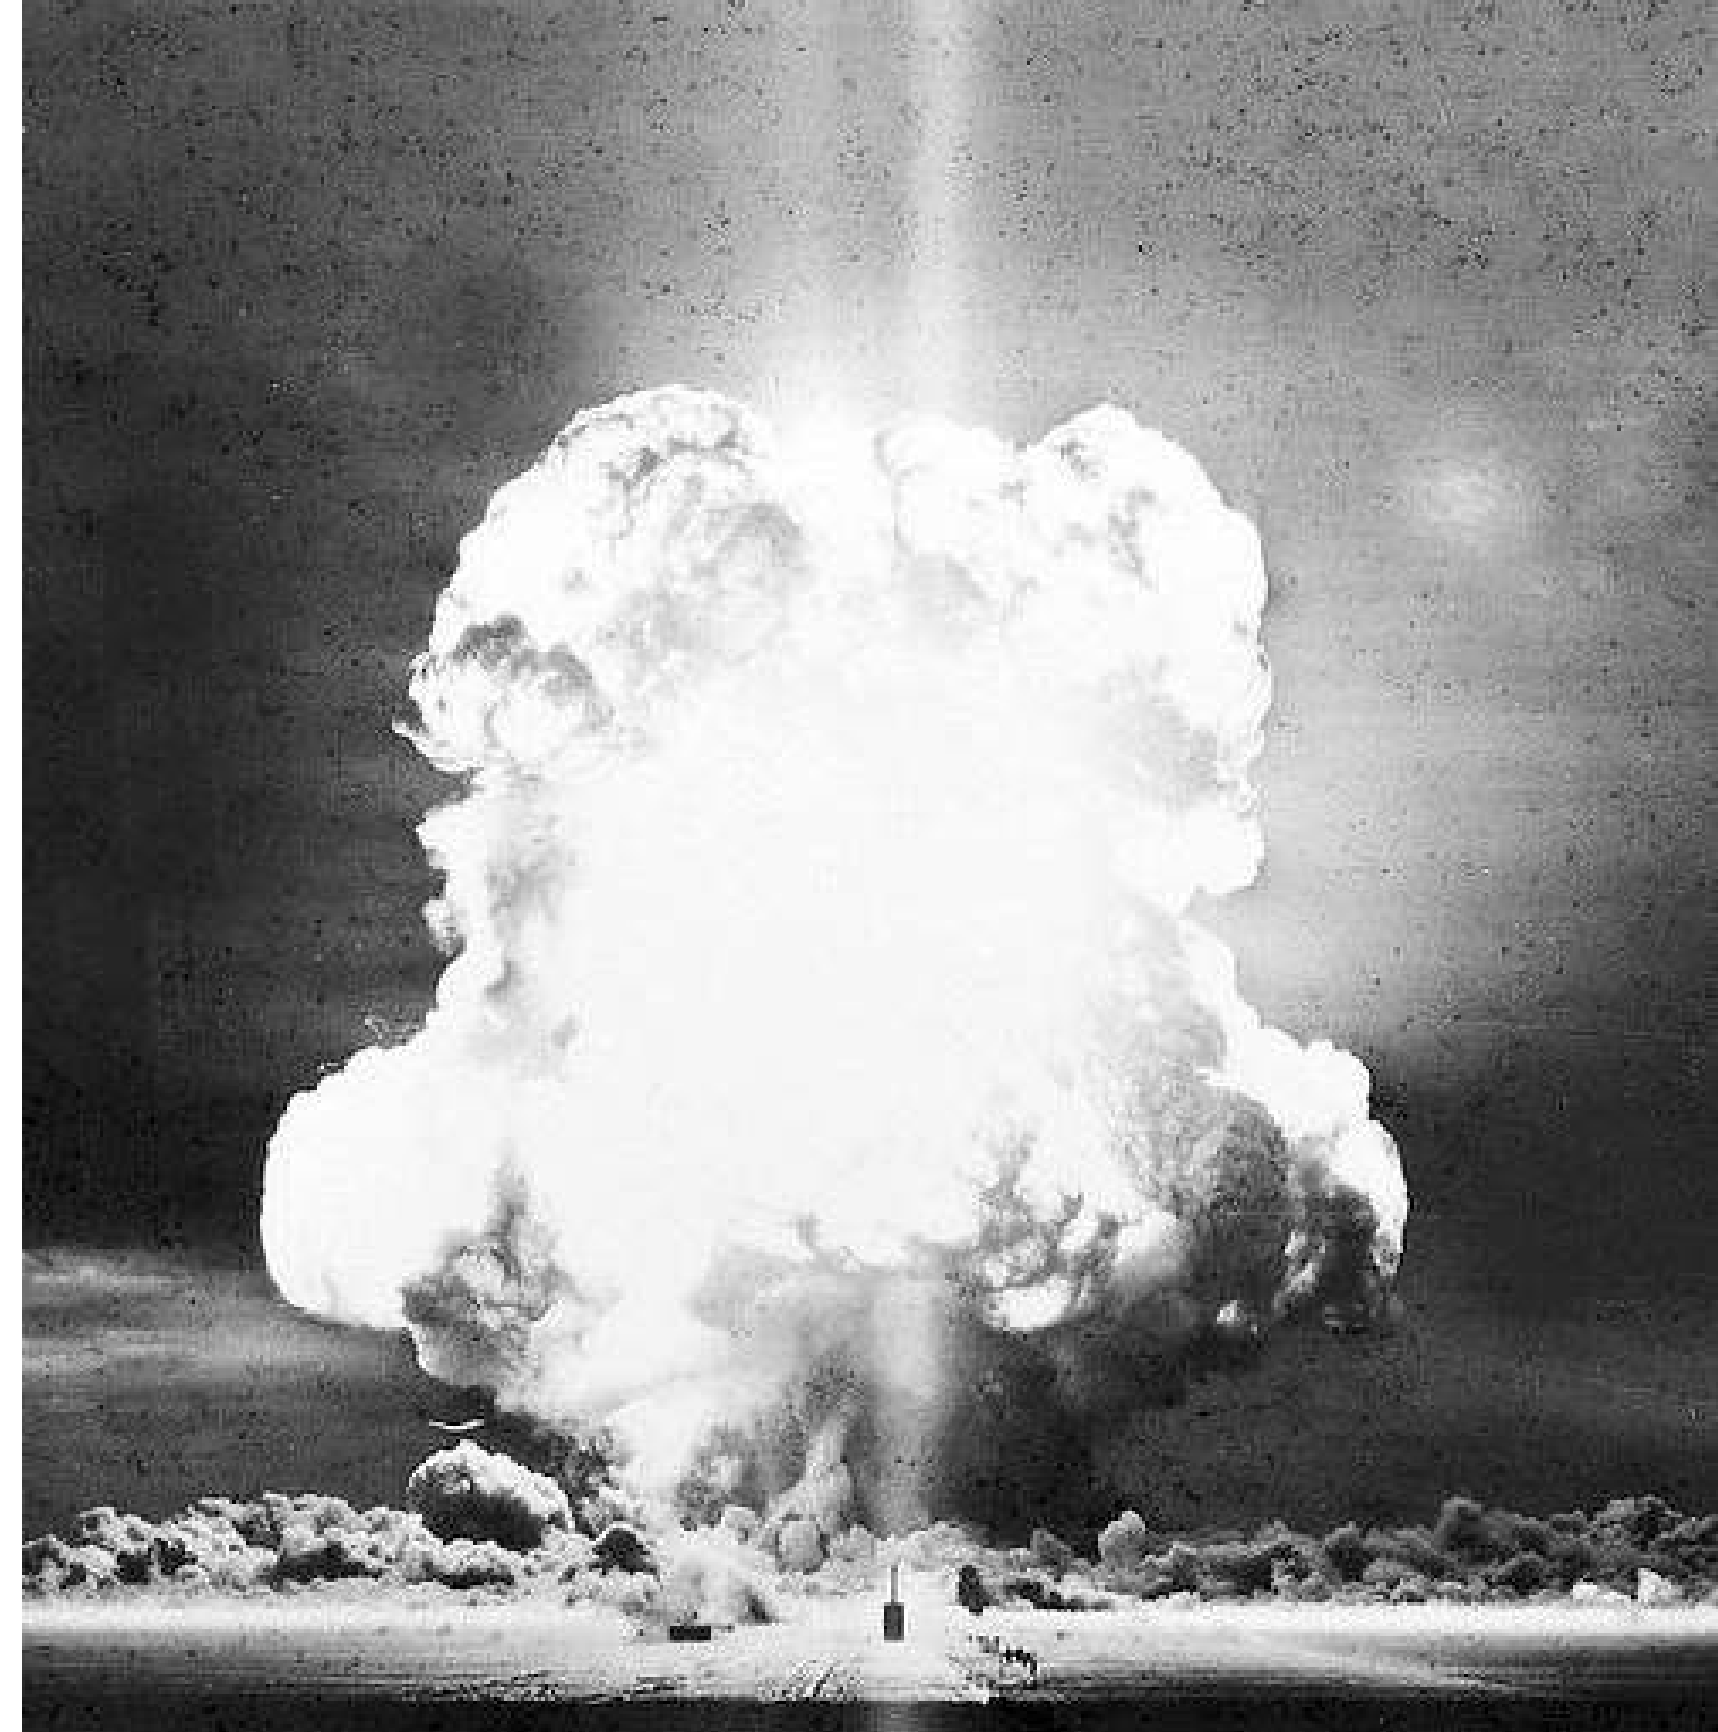

The bombs

the 2 bombs that were dropped on Japan were code named "little boy" for the Hiroshima nuke, and "fat man" for the Nagasaki nuke

Spies in the U.S

Because of the destructive power that the nuclear weapons had, the USSR sent spies to America to try and get information on how to make one themselves (Sheinkin) . Eventually after many attempts they managed to make one themselves on August 29th, 1949 they tested their first nuclear weapon

Cold war tensions

due to the end of the alliance between the U.S.S.R and the USA and the different ideology between them and the new arrival of nuclear weapons, there were tensions between the 2 superpowers

One of the biggest factor in the cold war was the split of Germany and the Berlin wall, both countries wanted to prove that their side was better. The thing was though, the U.S side was the obvious better side do to its capitalist nature but the ussr could not accept this so they spread propaganda

Hydrogen bomb

T

As both nations competed to get ahead in nuclear weapon advancements a guy named Edward Teller created the H bomb which was unimaginably stronger than the original atomic bomb .

“Manhattan Project Scientists: Edward Teller (U.S. National Park Service).” [Www.nps.gov](http://www.nps.gov), 26 Sept. 2023, www.nps.gov/people/manhattan-project-scientists-edward-teller.htm.

Cuban missile crisis

The Cuban missile crisis was one of the world's most intense and nerve-wracking time in history. After the United States saw the nuclear warheads facing right at their homeland they thought that war was inevitable propaganda was at an all time all. And everyone was at the edge of their seat

Cuban missile crisis

The Cuban missile crisis was an event that started when. The US sent a reconnaissance aircraft over Cuban land, and what it saw was nukes just pointed at America, because of this the president made people practice drills on nuclear attacks and several nuclear war preparations

Truce because of M.A.D

M.A.D (mutual assured
destruction) states that no one
can use nuclear weapon fearing
retaliation and leaving no winners

The Cuban missile crisis ended
somewhat peacefully when president
JFK agreed to take down missiles from
Pakistan if Nikita khrushchev removed the
missiles from cuba

Thesis

The nuclear arms race was a time where people feared death like no other although this reaction from people was reasonable, nuclear weapons revolutionized warfare and science. If only one country had nukes then everyone would live in fear but M.A.D prevents that. That is why this topic fits the theme
